

Interdisciplinary program on Mediterranean Plant Production and Processing, Environment, Human Health and Sustainability.

THE GENERAL CHALLENGE

→ Developing the production and consumption of safe and high-quality plant food in a Mediterranean context including the constraints of global change.

A TEACHING PROGRAM IN ENGLISH

- A research-oriented master's degree in agricultural sciences (IMAS)
- A doctorate degree with doctoral grants
- Seminars & summer schools

MAIN DISCIPLINES

- Plant and environmental sciences
- Food chemistry & processing
- Microbiology, nutrition & consumer sciences
- Cross-disciplinary methods

IMPLANTEUS AIMS TO TRAIN

- Future researchers to promote the sustainable production, transformation and consumption of safe high-quality plant food
- Future managers in innovation for the agro-food industry with experience in research
